

Abstract

This provides provides a basic sample map for natural resources. The various types of natural resources are mentioned. Learners will see an image of water cycle. Reading material link, for organic farming, which provides nutrients for soil is given as an attribute. A website link for reading on carbon cycle is also given. A pdf file is attached, describing the various types of water sources available to us. The various types of natural resources described here are,

- Water
- Wind
- Soil
- Air

We also describe water cycle and carbon cycle. Nitrogen cycle is also important for living systems. Greenhouse effect and various types of energy generation is also mentioned in the map.

For enhanced learning, learners are encouraged to add class notes as 'notes' to the nodes or reading materials for detailed understanding. You may also add more nodes to the map, add links, hyperlinks or modify as per your requirements.
